

VBI View

THE ONLY BI USER PORTAL YOU NEED

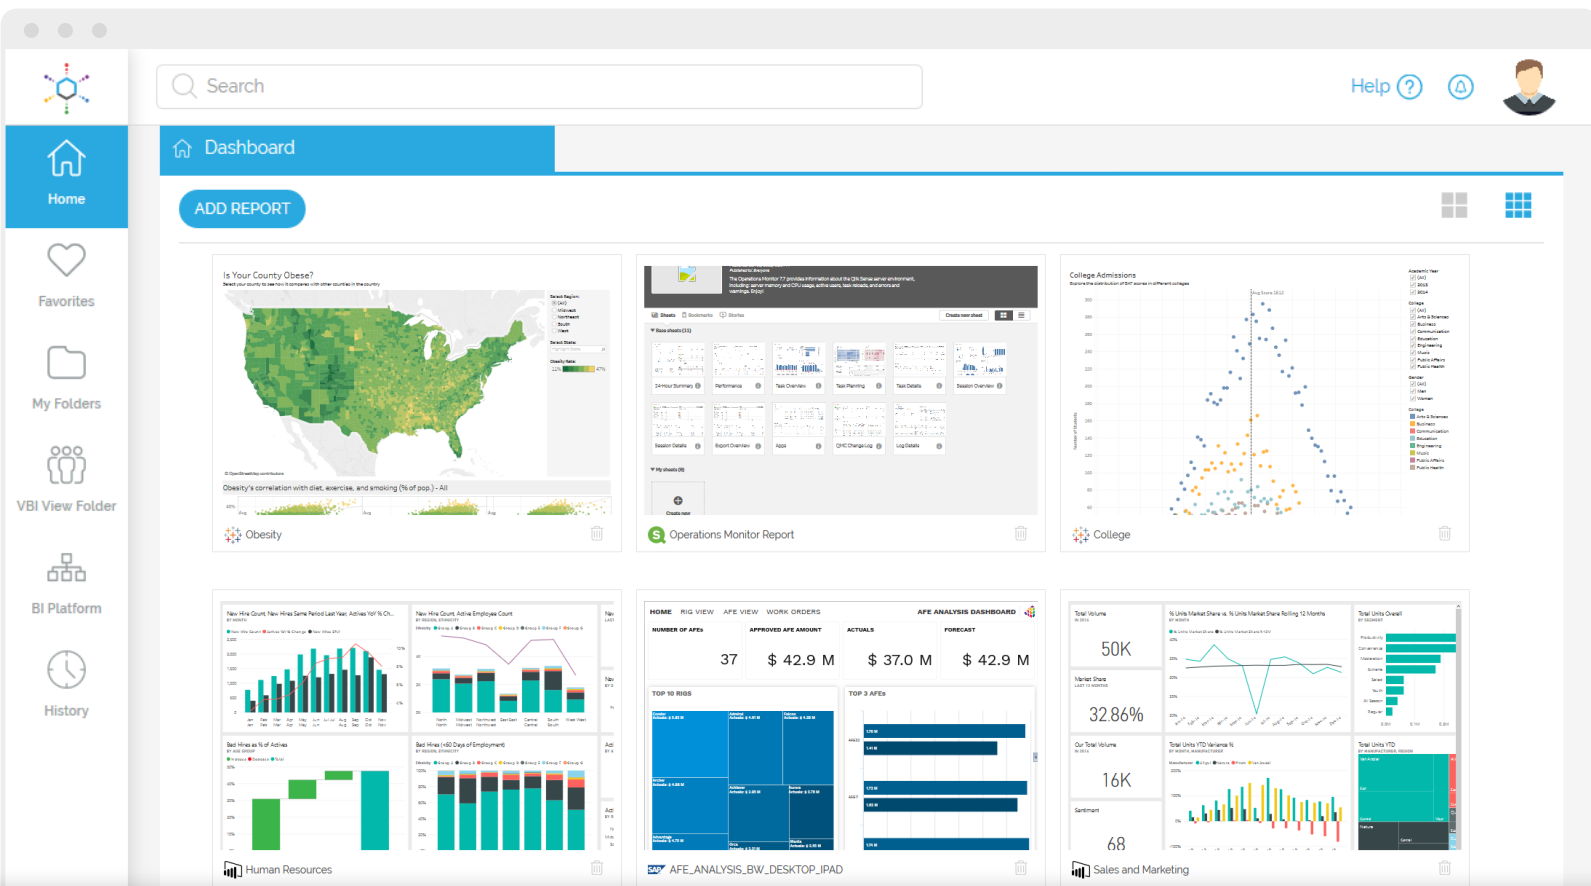

Introducing VBI View 2.0

VBI View is the only BI reporting portal that automatically populates itself with links to all the reports and dashboards from your company's BI systems. Currently supports SAP BusinessObjects, SAP Analytics Cloud, Power BI, SSRS, Tableau, Qlik Sense, Spotfire, and MicroStrategy.

A turn-key portal solution – it automatically populates itself and keeps itself up-to-date

VBI View also imports all the user accounts and their security from each reporting tool, maintaining all existing user/report security. Any changes and new reports are also automatically updated.

VBI View allows BI managers to provide report users with an excellent reporting portal experience and a beautiful user interface, without adding much work or extra maintenance for the BI or portal administrators.

KEY DIFFERENTIATORS OF VBI VIEW

With VBI View, report users:

- ⊕ Can access all their reports, stored in many different BI systems from a single portal
- ⊕ Can organize and categorize their reports the way they want to
- ⊕ Can collaborate with others via report comments, tag other users, contact report SMEs, etc.
- ⊕ Know which reports to trust based on each report's certification
- ⊕ Can find reports, even if they don't have access to them, saving them the time to create a report from scratch

With VBI View, administrators:

- ⊕ Don't have to manually create report links in their portal – VBI View can create report links and associated metadata for thousands of reports in a matter of minutes
- ⊕ Can create a consolidated folder structure for the whole company, regardless of which BI system the reports come from
- ⊕ Don't have to worry about new reports, deleted reports or changes in security – VBI View auto-sync keeps your portal always up-to-date
- ⊕ Can audit report usage to find out who is using which reports and when
